PROJECT · SITE & RENTAL EQUIPMENT

Tracking with operating-hour logging for construction and rental equipment

GPS · geofencing · IP69K · hour meter

I build a rugged tracking module that shows where your machines are, whether the engine is actually running – and how many hours to bill.

THE COSTLY PROBLEM

Construction machines are stolen, billed incorrectly by operating hours, or forgotten. Missed service intervals lead to costly repairs and downtime.

MY IOT SOLUTION

IP69K-rated module with GPS, LTE-M/NB-IoT, accelerometer for engine-run detection and backup battery – dustproof, waterproof, vandal-resistant.

MY SOFTWARE

Map of all rental assets, geofencing with time rules, automatic hour meter and maintenance indicator per machine.

YOUR BENEFITS

- Theft protection with instant alert
- Accurate billing instead of estimates
- Service intervals at a glance
- Geofencing outside working hours

100% customisable – hardware and software

Geofence zones, billing logic, ERP interface, mounting, trailer, the system to your rental fleet.
